

LALVIN BM4X4[™]

Saccharomyces cerevisiae

Increased aromatic intensity, color intensity, good length of finish and reliable fermentation performance

DESCRIPTION •

LALVIN BM4X4[™] is the result of an extensive study done in collaboration with INRAe (Montpellier, France) to optimize the performance of the popular yeast, Lalvin BM45[™]. The original yeast, Lalvin BM45[™], was selected by the Consorizo del Vino Brunello di Montalcino and the University of Sienna (Tuscany, Italy) for wines going through long macerations. The '»Dynamic Synergy» process of optimizing positive interactions between yeast was successfully applied on LALVIN BM45[™], resulting on a more efficient and secure yeast called LALVIN BM4X4[™]. This product retains the same contribution of the original yeast with increased fermentation reliability.

LALLEMAND

LALLEMAND OENOLOGY

BENEFITS & RESULTS

During alcoholic fermentation, LALVIN BM4x4[™] releases a significant quantity of polysaccharides. This results in a round mouthfeel, increases color stability and lowers the astringency of tannins (by stabilizing and binding polyphenols in the must).

LALVIN BM4X4[™] is suited for red wines, where mouthfeel, color and reliable fermentation kinetics are sought. It is also suited to the production of full-bodied white wines

YSEO[™] signifies Yeast Security and Sensory Optimization, a unique Lallemand yeast production process to help overcome demanding fermentation conditions.

YSEO[™] improves the reliability of alcoholic fermentation by improving yeast quality and performance and reduces the risk of sensory deviation even under difficult conditions. YSEO[™] yeasts are 100% natural and non-GMO.

PROPERTIES* •

- Saccharomyces cerevisiae var. cerevisiae
- Optimum fermentation temperature range: 16 to 28 °C
- Alcohol tolerance up to 16% v/v
- Moderate lag phase
- Moderate fermentation rate

- Competitive ("Killer K2") factor active
- Compatible with malolactic wine bacteria
- Low SO₂ production
- Low foam formation

*subject to fermentation conditions

INSTRUCTIONS FOR OENOLOGICAL USE

Dosage rate:

 25 g/hL of Active Dried Yeast (this will provide an initial cell population of approximately 5 x10⁶ viable cells/mL)

Procedure for 1000 L ferment.

- Add 300 g of Go-Ferm Protect Evolution™ to 5 L of 40-43 °C clean, chlorine free water. Stir until an homogenous suspension free of lumps is achieved.
- 2. When the temperature of this suspension is between 35-40 °C, sprinkle 250 g of yeast slowly and evenly onto the surface of the water, whilst gently stirring. Ensure any clumps are dispersed.
- 3. Allow to stand for 20 minutes before further gently mixing.

PACKAGING AND STORAGE

- Available in 500 g
- Store in a dry place at 4-11 °C
- To be used once opened

- 4. Mix the rehydrated yeast with a little juice, gradually adjusting the yeast suspension temperature to within 5-10 °C of the juice/must temperature.
- 5. Inoculate into the must.

Ontes:

- Steps 1-5 should be completed within 30 minutes.
- It is best to limit first juice/must volume addition to one tenth the yeast suspension volume and wait 10 minutes before the addition to juice.
- To minimize cold shock, ensure temperature changes are less than 10 °C.
- It is recommended that juice / must be inoculated no lower than 18°C.
- It is recommended to use complex nutrition nitrogen source, such as either **Fermaid AT**[™] or **Fermaid O**[™].
