

Saccharomyces cerevisiae

To reveal the aromatic potential of your white and rosé wines

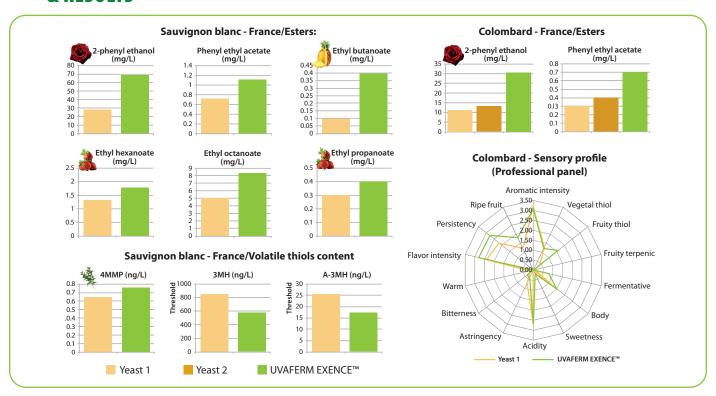

DESCRIPTION

Selected in collaboration with the Institute for Wine Biotechnology (University of Stellenbosch in South Africa). UVAFERM EXENCE™ comes from a natural crossing between two yeast strains, resulting in an aromatic yeast adapted to reveal varietal aromas such as thiols during fermentation of white and rosé wines.

BENEFITS & RESULTS

Wines fermented with UVAFERM EXENCE™ show an intense and complete aromatic profile with an exceptional expression of thiols, esters and floral aromas.

YSEO™ signifies Yeast Security and Sensory Optimization, a unique Lallemand yeast production process to help overcome demanding fermentation conditions.

YSEO[™] improves the reliability of alcoholic fermentation by improving yeast quality and performance and reduces the risk of sensory deviation even under difficult conditions. YSEO[™] yeasts are 100% natural and non-GMO.

- **PROPERTIES*** Saccharomyces cerevisiae var. cerevisiae
 - Competitive factor ("Killer K2") active
 - Alcohol tolerance up to 14.5% v/v
 - Optimal fermentation temperature above: 14°C
 - Low volatile acidity production
 - Low SO₂ production
 - Low nutritional requirement
 - Steady fermentation kinetics

INSTRUCTIONS FOR OENOLOGICAL USE

A. Rehydration without yeast protector

Dosage rate: 20 to 40 g/hL

- 1. Rehydrate the yeast in 10 times its weight in water (temperature between 35 °C and 40 °C).
- 2. Resuspend the yeast by gently stirring and wait for 20 minutes.
- 3. Mix the rehydrated yeast with a little juice/must, gradually adjusting the yeast suspension temperature to within 5-10 °C of the juice/must temperature.
- Inoculate into the must.

B. Rehydration with a yeast protector

In musts with high alcohol potential (> 13% v/v), with low turbidity (< 80 NTU) or other challenging conditions, the use of one of our GO-FERM[™] products (wine yeast protector) during yeast rehydration is recommended. Follow rehydration instructions according to the selected GO-FERM™ product.

Notes:

The total rehydration time should not exceed 45 minutes. It is crucial that a clean container is used to rehydrate the yeast. Rehydration directly in must is generally not advisable. Ensure yeast nutrition is appropriately managed during fermentation.

PACKAGING AND STORAGE

- Available in 500 g and 10 kg
- Store in a dry place at 4-11 °C
- To be used once opened
